THE
COMPLETE
IDIOT'S
GUIDE™ TO

Finance and Accounting

by Michael Muckian

alpha
books

1633 Broadway, New York, NY 10019

To my late father, Patrick Muckian, who always wanted me to publish a book. He never lived to see the first one come into print but, as an accountant, probably had the most profound impact of all on the success of this volume. Thanks, Dad.

Contents at a Glance

Part 1: Getting Started	1
1 Mastering Financial Management <i>It's not just for accountants—and it's not as bad as you may think.</i>	3
2 From Strategy to Business Plan <i>Having a strategy may mean the difference between success and failure. But even the best strategy will fail without a good business plan to put it to work.</i>	11
3 Budgeting 101 <i>You don't have to be an accountant to properly account for your business.</i>	27
Part 2: Accounting for Your Success	37
4 The Accountant in You <i>The more you know about how and why the people who handle the finances do what they do, the more easily and intelligently you'll be able to work with them—and understand your job better.</i>	39
5 Your Company's General Ledger <i>If a company's accounting system is its financial body, the general ledger is its heart.</i>	51
6 The Chart of Accounts <i>This is the primary tool to help the accounting department and all managers keep the debits and credits straight, in each department and throughout the company.</i>	57
7 Accounts Receivable <i>Who owes you money? How much? That's the essence of accounts receivable. But if you're smart, it can also be almost like cash in the bank.</i>	65
8 Accounts Payable <i>Keeping track of money you owe isn't nearly as much fun as keeping track of what you're going to collect, but it's a part of business life.</i>	77
9 Watching Your Cash Flow <i>If you think business is all about ending up the year with more money than when you started, you really should read about cash flow—or the end may come sooner than you think.</i>	87

Part 3: Managing with Accounting 99

- 10 Managing Payroll 101
Your employees are your most valuable asset. You know how much they're worth to your business, but do you know how much they cost and how to account for them?
- 11 Inventory Control 109
It's really tough to get what you want if you don't know what you've got.
- 12 Cost Accounting 119
Having money left after paying your bills does not necessarily mean you're profitable. You may know the direct costs of doing business, but if you don't figure on overhead, you may be in over your head.
- 13 Managing Internal Controls 131
People are people—and some of them yield to temptations. You're never too small to lose money and other assets.

Part 4: Sources of Funds and Acumen 139

- 14 Managing Commercial Lenders 141
You can't always get what you want, but you just might find you get what you need—if you know about borrowing and the art of making economic partners.
- 15 Using Venture Capital 153
Venture capitalists are called "angels" and sometimes they can help you work financial miracles. But not knowing the essentials of working with them can put you through hell.
- 16 Proprietorship, Partnership, or Incorporation? 163
How do you want to do business? What's the best structure for you? Not knowing can cost money—and not knowing how to maximize the advantages and minimize the disadvantages can cost even more.

Part 5: Your Company's Tax Obligations 175

- 17 Your Business Obligations to Uncle Sam 177
Now that you're in business, there's more to it than a simple W-2. And you really don't want to risk getting into trouble with the IRS.
- 18 Sharpening Company Tax Smarts 185
For some people, taxes are a way of measuring financial success. But if you're smart, you'll minimize your taxes—and find better ways to measure your success.

- 19 Partnerships, S Corporations, and Limited Liability Companies 193
When it comes to taxes, these three business structures are not like corporations. How are they different? And what's that worth to you?

Part 6: Strategies for Growth 201

- 20 Developing a Financial Plan 203
If you liked Chapter 2, you'll love this chapter. You know how to go from strategy to business plan. Now it's time to get a little more sophisticated, by developing a financial plan.
- 21 Forecasting Your Future 213
What lies ahead for your business? Sunny skies or sudden storms? You'll be better prepared if you know the basics about forecasting, the science of financial projections.
- 22 Preserving the Bottom Line 221
We all use the expression, "The bottom line is..." That's how we call attention to what matters most. The bottom line is the responsibility of your money manager, who focuses on your assets. Is your money manager the right person for the job? Is he or she doing as well as possible?
- 23 Developing Growth Strategies 233
Growth is good, right? Well, not necessarily. In fact, too much growth can stunt your growth—or kill your company. The difference between growth = success and growth = failure is planning.
- 24 Partnering with Vendors 243
We all know that business is competition. So, it often helps to work in teams. If your relationship with your vendors is basically a matter of orders and invoices, you probably could benefit from going beyond paperwork to partnerships.
- 25 Troubleshooting Your Business System 251
Can you recognize the signs and symptoms of a financial management system under stress? And do you know that by the time you recognize them, it may be too late? As with so many areas of business, it's important to have the proper system.
- A What's My Data? 263
- B Flexing Your Financial Muscles 271
- C Glossary 281
- Index 289
